

# Energy Performance Certificate

Northern Ireland

<b>Apartment 19 Annesley Building</b>	Date of assessment:	24 July 2009
<b>36, Old Bakers Court</b>	Date of certificate:	25 July 2009
<b>BELFAST</b>	Reference number:	9809-7146-4620-0020-4313
<b>BT6 8QY</b>	Accreditation scheme:	ECMK
	Assessor's name:	Mr Alan Cogan
	Assessor's accreditation number:	ECMK280006
	Employer/trading name:	Ulster EPC
	Employer/trading address:	21 Innotec Drive, Balloo Business Park Bangor, County Down, BT19 7PD
	Related party disclosure:	I am not related to the buyer nor seller

## Energy Efficiency Rating

## Technical information

<b>Main heating type and fuel:</b>	Boiler and radiators, mains gas
<b>Total floor area:</b>	40 m <sup>2</sup>
<b>Approximate energy use:</b>	183 kWh/m <sup>2</sup> per year
<b>Approximate CO<sub>2</sub> emissions:</b>	30 kg/m <sup>2</sup> per year
<b>Dwelling type:</b>	Top-floor flat

## Benchmark

Average for Northern Ireland

50

The approximate energy use and CO<sub>2</sub> emissions are per square metre of floor area based on fuel costs for the heating, ventilation, hot water and lighting systems. The rating can be compared to the benchmark of the average energy efficiency rating for the housing stock in Northern Ireland.

## Estimated energy use, carbon dioxide CO<sub>2</sub> emissions and fuel costs of this home

	Current	Potential
Energy use	183 kWh/m <sup>2</sup> per year	172 kWh/m <sup>2</sup> per year
Carbon dioxide emissions	1.2 tonnes per year	1.1 tonnes per year
Lighting	£43 per year	£22 per year
Heating	£212 per year	£215 per year
Hot water	£65 per year	£65 per year

Based on standardised assumptions about occupancy, heating patterns and geographical location, the above table provides an indication of how much it will cost to provide lighting, heating and hot water to this home. The fuel costs only take into account the cost of fuel and not any associated service, maintenance or safety inspection. This certificate has been provided for comparative purposes only and enables one home to be compared with another. Always check the date the certificate was issued, because fuel prices can increase over time and energy savings recommendations will evolve.

To see how this home can achieve its potential rating please see the recommended measures.

## About this document

The Energy Performance Certificate for this dwelling was produced following an energy assessment undertaken by a qualified assessor, accredited by ECMK Ltd, to a scheme authorised by the Government. This certificate was produced using the RdSAP assessment methodology and has been produced under the Energy Performance of Buildings (Certificates and Inspections) Regulations (Northern Ireland) 2008. A copy of the certificate has been lodged on a national register.

## If you have a complaint or wish to confirm that the certificate is genuine

Details of the assessor and the relevant accreditation scheme are on the preceding page. You can get contact details of the accreditation scheme from their web site at [www.ecmk.co.uk](http://www.ecmk.co.uk) together with details of their procedures for confirming authenticity of a certificate and for making a complaint.

## About the building's performance ratings

The ratings provide a measure of the building's overall energy efficiency and its environmental impact, calculated in accordance with a national methodology that takes into account factors such as insulation, heating and hot water systems, ventilation and fuels used. The average energy efficiency rating for a dwelling in Northern Ireland is band E (rating 50).

Not all buildings are used in the same way, so energy ratings use 'standard occupancy' assumptions which may be different from the specific way you use your home. Different methods of calculation are used for homes and for other buildings. Details can be found at [www.communities.gov.uk/epbd](http://www.communities.gov.uk/epbd)

Buildings that are more energy efficient use less energy, save money and help protect the environment. A building with a rating of 100 would cost almost nothing to heat and light and would cause almost no carbon emissions. The potential ratings in the certificate describe how close this building could get to 100 if all the cost effective recommended improvements were implemented.

Certification mark

The address and energy rating of the dwelling in this EPC may be given to EST to provide information on financial help for improving its energy performance.

For advice on how to take action and to find out about offers available to help make your home more energy efficient, call **0800 512 012** or visit [www.energysavingtrust.org.uk/myhome](http://www.energysavingtrust.org.uk/myhome)

## About the impact of buildings on the environment

One of the biggest contributors to global warming is carbon dioxide. The way we use energy in buildings causes emissions of carbon. The energy we use for heating, lighting and power in homes produces over a quarter of the UK's carbon dioxide emissions and other buildings produce a further one-sixth.

The average household causes about 6 tonnes of carbon dioxide every year. Adopting the recommendations in this report can reduce emissions and protect the environment. You could reduce emissions even more by switching to renewable energy sources. In addition there are many simple every day measures that will save money, improve comfort and reduce the impact on the environment. Some examples are given at the end of this report.

## Environmental Impact CO<sub>2</sub> Rating

	Current	Potential
<i>Very environmentally friendly - lower CO<sub>2</sub> emissions</i>		
<b>A</b> 92-100		
<b>B</b> 81-91	81	82
<b>C</b> 69-80		
<b>D</b> 55-68		
<b>E</b> 39-54		
<b>F</b> 21-38		
<b>G</b> 1-20		
<i>Not environmentally friendly - higher CO<sub>2</sub> emissions</i>

## Recommended measures to improve this home's energy performance

Apartment 19 Annesley Building  
36, Old Bakers Court

Date of certificate: 25 July 2009  
Reference number: 9809-7146-4620-0020-4313

BELFAST  
BT6 8QY

## Summary of this home's energy performance related features

The following is an assessment of the key individual elements that have an impact on this home's performance rating. Each element is assessed against the following scale: Very poor / Poor / Average / Good / Very good.

Element	Description	Current performance	
		Energy Efficiency	Environmental
Walls	Cavity wall, as built, insulated (assumed)	Good	Good
Roof	Pitched, 200 mm loft insulation	Good	Good
Floor	(other premises below)		
Windows	Fully double glazed	Average	Average
Main heating	Boiler and radiators, mains gas	Very good	Very good
Main heating controls	Programmer, TRVs and bypass	Poor	Poor
Secondary heating	None		
Hot water	From main system	Very good	Very good
Lighting	No low energy lighting	Very poor	Very poor
<b>Current Energy efficiency rating</b>		<b>B 82</b>	
<b>Current environmental impact (CO<sub>2</sub>) rating</b>		<b>B 81</b>	

## Low and zero carbon energy sources

None

**Recommendations**

The measures below are cost effective. The performance ratings after improvement listed below are cumulative, that is they assume the improvements have been installed in the order that they appear in the table.

Lower cost measures (up to £500)	Typical savings per year	Performance ratings after improvement	
		Energy efficiency	Environmental impact
1. Low energy lighting for all fixed outlets	£18	B 83	B 82
Total	£18		
Potential Energy efficiency rating		B 83	
Potential environmental impact (CO <sub>2</sub> ) rating			B 82

**Further measures to achieve even higher standards**

Not applicable

## About the cost effective measures to improve this home's performance ratings

Building regulations apply to most measures. Building regulations approval and planning consent may be required for some measures. If you are a tenant, before undertaking any work you should check the terms of your lease and obtain approval from your landlord if the lease either requires it, or makes no express provision for such work.

### Lower cost measures (typically up to £500 each)

These measures are relatively inexpensive to install and are worth tackling first. Some of them may be installed as DIY projects. DIY is not always straightforward, and sometimes there are health and safety risks, so take advice before carrying out DIY improvements.

#### 1 Low energy lighting

Replacement of traditional light bulbs with energy saving recommended ones will reduce lighting costs over the lifetime of the bulb, and they last up to 12 times longer than ordinary light bulbs. Also consider selecting low energy light fittings when redecorating; contact the Lighting Association for your nearest stockist of Domestic Energy Efficient Lighting Scheme fittings.

## About the further measures to achieve even higher standards

Not applicable

## What can I do today?

Actions that will save money and reduce the impact of your home on the environment include:

- Ensure that you understand the dwelling and how its energy systems are intended to work so as to obtain the maximum benefit in terms of reducing energy use and CO<sub>2</sub> emissions.
- Check that your heating system thermostat is not set too high (in a home, 21° C in the living room is suggested) and use the timer to ensure you only heat the building when necessary.
- Turn off lights when not needed and do not leave appliances on standby. Remember not to leave chargers (e.g for mobile phones) turned on when you are not using them.
- Close your curtains at night to reduce heat escaping through the windows.
- If you're not filling up the washing machine, tumble dryer or dishwasher, use the half-load or economy programme. Minimise the use of tumble dryers and dry clothes outdoors where possible.
